SDG 4: Quality Education

Agenda

SDG Goal 4: Quality Education

Husky Path connects to SDG 4 because inclusive education is not only about classrooms. Students also need to physically access campus spaces, learning resources, and academic opportunities.

SDG 4 focuses on inclusive and equitable quality education for all (United Nations, n.d.).

Problem Context

UW campus can be difficult to navigate. Student may struggle with:

Finding the correct building entrance

Understanding shortcuts between classes

Avoiding confusing or blocked routes

Locating accessible paths

Getting to class on time in unfamiliar areas

Existing map tools are useful, but they do not always show the campus-specific details students need.

Why this matter?

Navigation affects the student experience.

When students get lost, it can lead to:

- Stress before class
- Late arrivals
- Less confidence moving around campus
- Unequal access for students with mobility needs
- A harder transition for new and transfer students

For us, better wayfinding is part of making campus learning more accessible.

Goals of Husky Path

- Reduce navigation stress
- Help students find campus locations faster
- Support accessible route planning
- Make UW-specific route information easier to understand
- Create a tool that feels familiar, simple, and useful while walking

Solution Approach

Our solution is a campus-focused navigation MVP.

Husky Path helps students search for UW locations, view clearer walking routes, save important places, and understand route details that general map apps may miss. The goal is not to replace Google Maps, but to make navigation more useful for the UW campus experience.

Target Users

Husky Path is designed for:

- New students
- Transfer students
- Visitors and families
- Students rushing between classes
- Students with accessibility needs
- Anyone unfamiliar with a part of campus

Main user need:

A map that is quick, clear, and built for real student movement on campus.

Persona I

About:

Jordan is a first-year UW student who has recently moved from Utah. He's still learning the layout of campus and often feels overwhelmed navigating between large lecture halls and unfamiliar buildings. He wants a tool to reduce his stress and help him feel confident getting around campus.

Age: 19

Education: UW Freshman

Occupation: Undergraduate Student

Goals:

1. Find the fastest walking routes between classes
2. Avoid construction closures and last-minute detours
3. Reduce anxiety by knowing accessibility paths/building entrances

Frustrations:

1. Gets lost when buildings have multiple wings/hidden entrances
2. Struggles to estimate realistic travel times between back-to-back classes
3. Campus maps feel static and don't reflect real-time changes

Persona II

About:

Maya is a junior majoring in Informatics who uses a wheelchair. She loves UW but finds that many campus routes are steep, crowded, or unexpectedly blocked. She needs a navigation tool that prioritizes accessibility and gives her confidence that she can reach her classes safely and on time.

Age: 20

Education: UW Junior

Occupation: Undergraduate Student + Part-time HUB Receptionist

Goals:

1. Find accessible routes that avoid stairs or wheelchair-unfriendly paths
2. Get accurate ETA predictions based on mobility needs
3. Plan routes that include ramps and accessible entrances

Frustrations:

1. Google maps doesn't show accessible paths
2. Backtracking forces her to take longer/more unpredictable routes
3. Crowded walkways often slow her down

MVP Features

Building Information

Building Amenities

Accessibility Details

Operating Hours

Departments & Services

Testing & Feedback

Key Feedback Received:

Building footprints & markers

Classroom-level navigation

Accessibility routes

Route legends & shortcuts

User ratings & feedback

Design Improvements:

Clearer map experience

More detailed navigation

Accessibility support

User-driven updates

Final Solution

HUSKYPATH

Find a better way across UW

HuskyPath helps students and campus visitors compare walking routes, avoid stair-heavy paths when possible, and check basic building details before heading across the University of Washington campus.

AUDIO GUIDE

Example route instructions

Listen to a sample walkthrough for planning a route, switching route modes, and reporting path issues.

Transcript: HuskyPath route preview. Start by opening the Map tab. Pick your current location, then choose where you want to go. For example, choose Red Square as the start and Mary Gates Hall as the destination. Select Accessible to avoid stairs when possible. Follow the green route on the map, read the live navigation card, and use Start Navigation to recenter the path. If you see stairs, construction, or a hazard, click the map, choose the report type, add a note, and submit it for review.

TUTORIAL

How to use HuskyPath

1 Choose your route

Open the Map tab, select where you are starting from, then choose the building or campus landmark you want to reach.

2 Pick a route mode

Use Accessible when you want to avoid stairs where possible, Fastest for short class changes, Simplest for main paths, or Stairs OK when direct routes are fine.

3 Follow the map

4 Report path problems

Project takeaways

Students need campus-specific navigation support.

Accessibility features add value for all users.

User testing revealed important design improvements.

Simple and familiar interfaces improve adoption.

Limitation

Route accuracy depends on OpenStreetMap data.

Some accessibility information is manually added and may not be complete.

Building-level navigation is supported, but classroom-level navigation is not yet available.

Construction updates and temporary obstacles are not updated in real time.

Future Expansion

Thank you!
